Carbon Reduction Policy

The climate change is the global effect on industrialization. Every industrial sector has to take its measures to counter the greenhouse effect. Worldwide the air transport is responsible for 2 % - 2.5 % of the global CO₂-Emission. We want to make our contribution to an eco-friendly society. Based on our capabilities the Airport Altenrhein AG strives to minimize its negative effect on the greenhouse effect and the environment in general.

Our commitment is to:

- Reduce energy consumption and greenhouse gas emission wherever possible as much as reasonably practicable to achieve carbon neutrality by 2030.
- Describe the way to achieve this goal by dividing it up to sub-tasks in a Carbon Management Plan showing the timeline and giving evidence for tasks fulfilled.
- Have sufficient resources (human, financial, infrastructure) available to successfully strive to a carbon neutral operation of the Airport St.Gallen-Altenrhein.
- Structure the organization and initiate the necessary training to achieve adequate awareness and responsibility for environmental protection.
- Continuously improve the processes towards an environmentally friendly organization.
- Analyze other effects on the environment and reduce negative effects wherever reasonably practicable.

Signed,

Thomas Krutzler
Chief Executive Officer
Airport St.Gallen-
Altenrhein

Janine Meier
Chief Operation Officer
